

# Flow measurement traceability for hydrogen in gas networks

1<sup>st</sup> Stakeholder Committee – 18<sup>th</sup> February 2025

METROLOGY  
PARTNERSHIP

EUROPEAN PARTNERSHIP

Co-funded by  
the European Union

# H2FLOWTRACE – CONTEXT

- **Objectives of the *European Green Deal***
  - -55% reduction in greenhouse gas emissions (compared with 1995) by 2030
  - End of the greenhouse gas emissions by 2050
- **Hydrogen** is a key resource for Europe's energy transition (*Hydrogen Roadmap Europe*)

➔ The use of hydrogen will increase significantly

# FLOW METROLOGY BARRIERS & OBJECTIVES

- Current barriers
  - Today, building primary flow standards is prohibitively **expensive**
  - Lack of **traceable** calibration facilities to perform flow meter R&D and certification
  - Lack of **accuracy** data
  - End users (gas network and storage operators, energy companies) unable to select **suitable flow meters** for H<sub>2</sub> and HENG
- How to make accessible traceability to NMIs/DIs
  - Develop and validate **a new testing method and services** of flow calibration with H<sub>2</sub> and alternative fluids
- Help end-users with hydrogen transition
  - Create **data sets** for accuracy of domestic and industrial meters for H<sub>2</sub> and HENG
  - New **services** of calibrations for hydrogen applications (H<sub>2</sub> or alternative fluids)

# H2FLOWTRACE CONSORTIUM

11 European countries are involved

8 National Metrology  
Institutes & Designated  
Institutes

2 Gas operators

1 R&D Institute

3 Calibration Laboratories

1 University

2 Gas Meters Manufacturers

# WP1 – TRACEABILITY FOR H<sub>2</sub> OR HENG, FOR SMALL INDUSTRIAL METERS, USING A SMALL SCALE TRANSFER SKID

## OBJECTIVES & TASKS

- Metrological infrastructure for H<sub>2</sub> and HENG
  - **0.1 m<sup>3</sup>/h to 400 m<sup>3</sup>/h**
  - **0.01 MPa(g) to 1.6 MPa(g)**
  - **Uncertainty < 0.2%**
- Calibration of small sonic nozzles with hydrogen at up to **20 kg/h** using CESAME “PVTt” primary standard, bootstrapping up to 720 kg/h
- Laboratory intercomparison of world-renowned institutes

*SSTS with sonic nozzles*

## PRIMARY BENCH FOR CALIBRATION

*PVTt bench - CESAME*

# WP2 – METROLOGICAL INFRASTRUCTURE FOR H<sub>2</sub> AND HENG IN LARGE FLOWS

## OBJECTIVES & TASKS

- Metrological infrastructure for H<sub>2</sub> and HENG
  - 200 m<sup>3</sup>/h to 10000 m<sup>3</sup>/h
  - 0.3 MPa(g) to 6.2 MPa(g)
  - Target uncertainty 0.2%
- Calibration of large transfer skid (LSTS) master meters
- Laboratory intercomparison of the main H<sub>2</sub> and HENG test loop facilities

H<sub>2</sub>-Loop - RMA

## HYDROGEN FACILITIES FOR INTERCOMPARISON

- Natran (Ex-GRTgaz)
- DNV
- RMA
- Enagas (if possible regarding the timeline)

# WP3 – TRACEABILITY TRANSFER SKIDS FOR H2 AND HENG

## OBJECTIVES & TASKS

- Development of **2 transfer skids** to deliver SI traceability
- Design, **construction**, uncertainty assessment
- Joint measurement service: **future exploitation** of the transfer skids

*LSTS proposal design (temporary), with 2 master meters*

# WP4 – EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## OBJECTIVES & TASKS

- Providing statistically meaningful **data sets** for accuracy of domestic and industrial meters
- Alternative fluid calibrations for H<sub>2</sub> and HENG
- Largest test programme to date, with gas meters identified in stakeholder workshop:
  - **≥ 25 domestic gas meters**
  - **≥15 industrial gas meters**

*Sick ultrasonic gas meter*

## LARGE CALIBRATION CAMPAIGN

# WP5/WP6 – OUTPUTS & IMPACT ; COORDINATION

## OUTPUTS & IMPACT - GERG

- **Communicate and disseminate** H2FlowTrace results
  - Website, flyer, LinkedIn page (Follow us!)....
- **Exploitation and uptake**
  - Show how metrological barriers can be removed
  - Using WP4 data sets to determine when a calibration with any fluid is acceptable
  - Make informed selection of hydrogen flow meters, supported by metrology community and validated calibration facilities

*H2FlowTrace Kick-off meeting at Poitiers, France*

## PROJECT COORDINATION - CESAME

- **Project management**
  - Ensure the schedule is respected
  - Organise meetings with every partner
  - Ensure the objectives can be reached
- **Project reporting**
  - Periodic and final reports
  - Project reviews

# Hydrogen traceability with low uncertainty

1<sup>st</sup> Stakeholder committee – 18<sup>th</sup> February 2025

METROLOGY  
PARTNERSHIP

EUROPEAN PARTNERSHIP

Co-funded by  
the European Union

# SUMMARY OF WP<sub>1</sub>

## AIMS:

- Establish robust metrological infrastructure for small industrial meters, focussing on pure hydrogen but also enabling traceability for HENG
- Flow range: (0.1 to 400) m<sup>3</sup>/h
- Pressure range: (0.01 to 1.6) MPa
- Uncertainty  $\leq 0.2 \%$
- Traceability route for larger meters from WP2 and WP3

Primary standard

Small Scale Transfer Skid

Large Scale Transfer Skid

Accredited laboratories

# SUMMARY OF WP<sub>1</sub>

## AIMS:

- Establish robust metrological infrastructure for small industrial meters, focussing on pure hydrogen but also enabling traceability for HENG
- Flow range: (0.1 to 400) m<sup>3</sup>/h
- Pressure range: (0.01 to 1.6) MPa
- Uncertainty  $\leq 0.2 \%$
- Traceability route for larger meters from WP2 and WP3

## HOW:

- Design and calibrate set of small critical nozzles for Small-Scale Transfer Skid (SSTS) to be developed in WP3
- Develop and calibrate set of larger nozzles with traceability to SSTS
- Perform Inter-Laboratory Comparison (ILC) with existing test rigs using calibrated master meter

# SUMMARY OF WP<sub>1</sub>

## AIMS:

- Establish robust metrological infrastructure for small industrial meters, focussing on pure hydrogen but also enabling traceability for HENG
- Flow range: (0.1 to 400) m<sup>3</sup>/h
- Pressure range: (0.01 to 1.6) MPa
- Uncertainty  $\leq 0.2 \%$
- Traceability route for larger meters from WP2 and WP3

## HOW:

- Design and calibrate set of small critical nozzles for Small-Scale Transfer Skid (SSTS) to be developed in WP3
- Develop and calibrate set of larger nozzles with traceability to SSTS
- Perform Inter-Laboratory Comparison (ILC) with existing test rigs using calibrated master meter

## WHY:

- Primary standard for large flow rates would be expensive

# OVERVIEW OF TASKS

- Task 1.1: Traceability route for CFVN at low flow rates (20 kg/h per nozzle)
  - Design and manufacturing of small sonic nozzles Set A
  - Wet and dimensional calibration of CFVN from Set A
  - To be used in Small-Scale Transfer Skid (SSTS) from WP3

# OVERVIEW OF TASKS

- Task 1.1: Traceability route for CFVN at low flow rates (20 kg/h per nozzle)
  - Design and manufacturing of small sonic nozzles Set A
  - Wet and dimensional calibration of CFVN from Set A
  - To be used in Small-Scale Transfer Skid (SSTS) from WP3
- Task 1.2: Traceability route for CFVN at medium flow rates (120 kg/h per nozzle)
  - Design and manufacturing of larger sonic nozzles Set B
  - Wet and dimensional calibration of CFVN from Set B
  - Use SSTS to calibrate nozzles from Set B
  - **D1 (technical report)**

# OVERVIEW OF TASKS

- Task 1.1: Traceability route for CFVN at low flow rates (20 kg/h per nozzle)
  - Design and manufacturing of small sonic nozzles Set A
  - Wet and dimensional calibration of CFVN from Set A
  - To be used in Small-Scale Transfer Skid (SSTS) from WP3
- Task 1.2: Traceability route for CFVN at medium flow rates (120 kg/h per nozzle)
  - Design and manufacturing of larger sonic nozzles Set B
  - Wet and dimensional calibration of CFVN from Set B
  - Use SSTS to calibrate nozzles from Set B
  - **D1 (technical report)**
- Task 1.3: Laboratory comparison up to 2500 Nm<sup>3</sup>/h for hydrogen test rigs to assess their measurement uncertainty
  - Specs of transfer standard and delivery of transfer standard
  - Comparison protocol for pure hydrogen calibrations
  - Uncertainty budgets for test rigs
  - At least 2 test rigs to take part in comparison
  - Technical report and peer-reviewed paper
  - **D2 (technical report)**

# RESULTS FROM WP1

- Building blocks of metrological infrastructure for H<sub>2</sub>
- New traceability for H<sub>2</sub> and HENG using calibrated nozzles to be used in the SSTS for small industrial meters
- New traceability for H<sub>2</sub> and HENG using calibrated nozzles to be used in the LSTS
- Uncertainty assessment and exploitation of validated H<sub>2</sub> flow metering infrastructure

# CURRENT STATUS

- Dimensioning of nozzles and holder → concluded
- Nozzles have been ordered → Available end of February
- Holder has been ordered → Available end of March

# CURRENT STATUS

- Dimensioning of nozzles and holder → concluded
- Nozzles have been ordered → Available end of February
- Holder has been ordered → Available end of March

## NEXT (M6 TO M<sub>12</sub>)

- Dimensional calibration of all nozzles
- Measurement plan for wet calibration of nozzles
- Wet calibration of nozzles of SSTS
- Measurement plan to calibrate nozzles from the LSTS using the SSTS
- Comparison protocol for intercomparison between different labs up to 2500 Nm<sup>3</sup>/h

# ORGANISATION

- Monthly coordination meetings for WP1
- Regular coordination meetings WP leaders
- Strong inter-dependency with WP3
  - Building SSTs
  - Obtaining transfer standard / master meter

|            | Task 1.3 : Assessing the measurements' uncertainties for hydrogen testing facilities at low flow rate via an intercomparison (max 2500Nm3/h) |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.1     | Define the flow meter specifications                                                                                                         |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.2     | Delivery of the Master Meter                                                                                                                 |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.3     | Creating protocol for the intercomparison for pure Hydrogen                                                                                  |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.4     | Uncertainty budgets                                                                                                                          |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.5     | Logistics of intercomparisons (transfer meter)                                                                                               |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.6     | Analysis of intercomparison & report                                                                                                         |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |
| A1.3.7     | Peer reviewed paper                                                                                                                          |    |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |          |         |         |         |          |          |          |         |         |          |          |          |

# Hydrogen traceability with low uncertainty

1st Stakeholder committee – 18th February 2025

METROLOGY  
PARTNERSHIP

EUROPEAN PARTNERSHIP

Co-funded by  
the European Union

## WORK PACKAGE 2

- To establish a robust metrological infrastructure for **pure hydrogen** and **hydrogen/natural gas blends** in large industrial meters.
- flow rate: 200 m<sup>3</sup> /h to 10 000 m<sup>3</sup> /h
- Pressure range: 0.3 MPa(g) to 6.2 Mpa
- Uncertainty of 0.30 %

## WORK PACKAGE 2

- To establish a robust metrological infrastructure for **pure hydrogen** and **hydrogen/natural gas blends** in large industrial meters.
- flow rate: 200 m<sup>3</sup> /h to 10 000 m<sup>3</sup> /h
- Pressure range: 0.3 MPa(g) to 6.2 Mpa
- Uncertainty of 0.30 %

### HOW:

- Facility with according capabilities (H<sub>2</sub> & HENG) in Europe
- Calibration of large transfer skids (LSTS) master meters
- Intercomparison to ensure traceability to the Large-Scale Transfer Skid (LSTS)
- Uncertainty budgets of the facilities

## WORK PACKAGE 2

- To establish a robust metrological infrastructure for **pure hydrogen** and **hydrogen/natural gas blends** in large industrial meters.
- flow rate: 200 m<sup>3</sup> /h to 10 000 m<sup>3</sup> /h
- Pressure range: 0.3 MPa(g) to 6.2 Mpa
- Uncertainty of 0.30 %

### HOW:

- Facility with according capabilities (H<sub>2</sub> & HENG) in Europe
- Calibration of large transfer skids (LSTS) master meters
- Intercomparison to ensure traceability to the Large-Scale Transfer Skid (LSTS)
- Uncertainty budgets of the facilities

### WHY:

Primary standard for large flow rates would be expensive

# OVERVIEW OF TASKS

- Task **2.1**: European facilities for testing and calibrating industrial gas meters with pure hydrogen and HENG
    - Mapping of the consortium's primary facilities, working standards and industrial facilities, which can be used by the public
    - Developing and conducting a program for pre-validation testing
    - Assessment of suitability of the facilities for H<sub>2</sub> and HENG
    - Analysis of the results
- Report on the the pre-validation testing results

# OVERVIEW OF TASKS

- Task **2.2**: Traceability and intercomparison for pure hydrogen and HENG for large industrial meters
    - Calibration of the master meters with H<sub>2</sub> and HENG
    - Intercomparison:
      - Pure H<sub>2</sub>
      - HENG
- Report: *Intercomparison of large flow calibration facilities for hydrogen and HENG*

# OVERVIEW OF TASKS

- Task 2.3: Uncertainty budget and summary report
  - Uncertainty budgets will be developed for
    - each of the test facilities participating in the intercomparison (Task 2.2)
    - validated using the results from the intercomparison
    - and revised if necessary
- Report: *“Summary report on the testing of the newly developed robust metrological infrastructure for flow rates of 200 m<sup>3</sup> /h to 10 000 m<sup>3</sup> /h, and pressures of 0.3 MPa(g) to 6.2 MPa(g), for hydrogen and hydrogen enriched natural gas (HENG) in large industrial meters, with a measurement uncertainty of 0.30 % or less”*

# RESULTS FROM WP2

- Building blocks of metrological infrastructure for H<sub>2</sub>
- New traceability for H<sub>2</sub> and HENG using calibrated master meters to be used in the LSTS for large industrial meters
- New traceability for H<sub>2</sub> and HENG using calibrated LSTS for test facilities using H<sub>2</sub> and HENG
- Uncertainty assessment and exploitation of validated H<sub>2</sub> flow metering infrastructure

# CURRENT STATUS

- Mapping is done
- Start of the design of the program for pre-validation
- Planning of the master meters calibration

# CURRENT STATUS

- Mapping is done
- Start of the design of the program for pre-validation
- Planning of the master meters calibration

## NEXT (M6 TO M12)

- Pre-validation will start
- Start of the development of uncertainty budgets

# ORGANISATION

- Bi-monthly coordination meetings for WP2
- Regular coordination meetings WP leaders
- Strong inter-dependency with WP3
  - Building LSTS

WP2 meeting:

2nd Tuesday of the month

Projekt meeting:

M1, 9, 18, 27 & 36

Milestones:

checking progress at meeting

# Traceability transfer skids for pure hydrogen and HENG

1<sup>st</sup> Stakeholder Committee – 18<sup>th</sup> February 2025

*LSTS proposal design (preliminary), with 2 master meters*

METROLOGY  
PARTNERSHIP

EUROPEAN PARTNERSHIP

Co-funded by  
the European Union

# TRACEABILITY TRANSFER SKIDS FOR PURE HYDROGEN AND HENG

Less

Measurement uncertainty

More

Gas flow traceability chain (typical)

Modified from Schakel et al., IMEKO 2024

**SOLUTION: BOOTSTRAP**

More

Typical gas flow CAPEX (illustrational)

CAPEX

# TRANSE SKIDS AND ARE SOLUTION TO

- Current barriers
  - Today, building primary flow standards is prohibitively **expensive**
  - Lack of **traceable** calibration facilities to perform flow meter R&D and certification
  - Lack of **accuracy** data
  - End users (gas network and storage operators, energy companies) unable to select **suitable flow meters** for H<sub>2</sub> and HENG
- How to make accessible traceability to NMIs/DIs
  - Develop and validate a **new testing method and services** of flow calibration with H<sub>2</sub> and alternative fluids
- Help end-users with hydrogen transition
  - New **services** of calibrations for hydrogen applications (H<sub>2</sub> or alternative fluids)

# SSTS & LSTS: PUT IT ALL TOGETHER

- SSTS: small-scale transfer skid
- LSTS: large-scale transfer skid

## H<sub>2</sub> & HENG gas transmission network flow traceability

PVTt bench - CESAME

1. Secure CFVNs
  2. Calibrate CFVN @ 20 kg/h (6x) with pVTt
- Primary system,  $p_{up} = 51$  bar(a),  $\leq 0.2$  % ( $k = 2$ )

3. Create SSTS
4. Insert CFVNs
5. GRTGaz: calibrate CFVN @ 120 kg/h (6x) on H<sub>2</sub>
6. GRTGaz: calibrate CFVN @ 120 kg/h (1x) on N<sub>2</sub>/NG

- GRTGaz system:  $p_{up} = 41$  bar(a),  $\sim 0.2$  % ( $k = 2$ )

7. Secure MMs (2x)
8. FORCE: calibrate G160 MM (2x) on HENG
9. Replace CFVNs with larger ones
10. DNV: SAT/commissioning SSTS
11. DNV: calibrate G400 MM (2x) with CFVNs on H<sub>2</sub>

- DNV system:  $p_{up} = 33$  bar(a),  $\sim 0.2$  % ( $k = 2$ )

12. Create LSTS
13. "Insert" MMs
14. FORCE/RMA: SAT/commissioning LSTS
15. FORCE/RMA: calibrate G650 (1x)

- Secondary system:  $p_{max} = 51$  bar(a),  $\leq 0.30$  % ( $k = 2$ )

# CALIBRATION SERVICES

- *Calibration services to hydrogen (blend) gas flow calibration and test facilities*

- Targeted SSTS Qmax is at 720 kg/h (6 large nozzles) corresponding to 7800 m<sup>3</sup>/h at 0.1 MPa or 270 m<sup>3</sup>/h at 3.3 MPa
- Targeted LSTS Qmax is at 1000 m<sup>3</sup>/h with pmax at 6.2 MPa(g)
- Further bootstrapping to 10 000 m<sup>3</sup>/h or larger at small increase in uncertainty enabled
- Traceability to Cesame's pVTt pure hydrogen primary standard

SSTS with sonic nozzles

LSTS proposal design (preliminary), with 2 master meters

PVTt bench - CESAME

Consortium partners: DNV, FORCE, NaTran, RMA, ....

# SSTS, LSTS, AND SOLUTION TO ARE

- Current barriers

**Solved** ✓ Today, building primary flow standards is prohibitively **expensive**

**Solved\*** ✓ Lack of **traceable** calibration facilities to perform flow meter R&D and certification

**Solved\*** ✓ Lack of **accuracy** data

**Solved \*** ✓ End users (gas network and storage operators, energy companies) unable to select **suitable flow meters** for H<sub>2</sub> and HENG

- How to make accessible traceability to NMIs/DIs

**Solved** ✓ Develop and validate a **new testing method and services** of flow calibration with H<sub>2</sub> and alternative fluids

- Help end-users with hydrogen transition

**Solved** ✓ New **services** of calibrations for hydrogen applications (H<sub>2</sub> or alternative fluids)

\*Additional metrological work required

# M6 OF PROJECT – HOW FAR ARE WE?

- SSTS:
  - pVTt system ready (from previous project MetHyInfra)
  - Design completed: executive P&ID and 3D-model
  - Entire components list/bill of materials defined
  - Ordering components (nozzles, valves, electrical, piping,...)
  - Mechanical: builder identified
  - Electrical: scheme defined
  - Data acquisition/software: pending
  - PED & ATEX: requirements carefully considered in design phase

# M6 OF PROJECT – HOW FAR ARE WE?

- LSTS:
  - pVTt system ready (from previous project MetHyInfra)
  - Preliminary design nearly completed: process flow diagram
  - Components identified, including master meters
  - Ordering components (master meters and valves)
  - Mechanical: builder identified
  - Electrical: pending
  - Data acquisition/software: pending
  - PED & ATEX: requirements carefully considered in design phase

*LSTS proposal design (preliminary), with 2 master meters*

# M6 OF PROJECT – WHAT'S NEXT?

- SSTS:
  - Further components ordering
  - Mechanical: contracting the building
  - Finalize electrical and data acquisition/software (step 3)
  - Inserting CFVNs (step 4)
  - Commissioning the SSTS (step 10)
- SSTS operationally and metrologically commissioned by the turn of the year 2025/2026

## H<sub>2</sub> & HENG gas transmission network flow traceability

PVT bench - CESAME

1. Secure CFVNs
  2. Calibrate CFVN @ 20 kg/h (6x) with pVTt
- Primary system,  $p_{up} = 51$  bar(a),  $\leq 0.2\%$  ( $k = 2$ )

3. Create SSTS
4. Insert CFVNs
5. GRTGaz: calibrate CFVN @ 120 kg/h (6x) on H<sub>2</sub>
6. GRTGaz: calibrate CFVN @ 120 kg/h (1x) on N<sub>2</sub>/NG

- GRTGaz system:  $p_{up} = 41$  bar(a),  $\sim 0.2\%$  ( $k = 2$ )

7. Secure MMs (2x)
8. FORCE: calibrate G160 MM **(2x) on HENG**
9. Replace CFVNs with larger ones
10. DNV: SAT/commissioning SSTS
11. DNV: calibrate G400 MM (2x) with CFVNs on H<sub>2</sub>

- DNV system:  $p_{up} = 33$  bar(a),  $\sim 0.2\%$  ( $k = 2$ )

# M6 OF PROJECT – WHAT'S NEXT?

- LSTS:
  - Secure master meters (step 7)
  - Create LSTS (step 12)
    - Finalize design: executive P&ID and 3D-model
    - Further components ordering
    - Mechanical: contracting the building
    - Electrical/data acquisition/software
  - Installing calibrated MMs (step 13)
  - Commissioning the LSTS (step 14)
- LSTS operationally and metrologically commissioned in Q4 2026

## H<sub>2</sub> & HENG gas transmission network flow traceability

7. Secure MMs (2x)
  8. FORCE: calibrate G160 MM **(2x) on HENG**
  9. Replace CFVNs with larger ones
  10. DNV: SAT/commissioning SSTS
  11. DNV: calibrate G400 MM (2x) with CFVNs on H<sub>2</sub>
- DNV system:  $p_{up} = 33 \text{ bar(a)}$ ,  $\sim 0.2\%$  ( $k = 2$ )

12. Create LSTS
  13. "Insert" MMs
  14. FORCE/RMA: SAT/commissioning LSTS
  15. FORCE/RMA: calibrate G650 (1x)
- Secondary system:  $p_{max} = 51 \text{ bar(a)}$ ,  $\leq 0.30\%$  ( $k = 2$ )

# Flow measurement traceability for hydrogen in gas networks

1<sup>st</sup> Stakeholder Committee – 18<sup>th</sup> February 2025

METROLOGY  
PARTNERSHIP

EUROPEAN PARTNERSHIP

Co-funded by  
the European Union

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## Objective 4

To perform (i) primary calibrations of domestic gas meters (ultrasonic, diaphragm, thermal mass) with air and/or methane and with pure hydrogen up to 30 m<sup>3</sup>/h at atmospheric pressure and (ii) primary and secondary calibrations of industrial gas meters (ultrasonic, rotary, turbine) with air and/or natural gas and hydrogen/natural gas blends at flow rates of up to 1000 m<sup>3</sup>/h and pressures of up to 6.2 MPa (g).

Based on these results as well as existing data, to deliver statistically meaningful datasets for air, natural gas, or other alternative fluid calibration for the transferability to hydrogen gas flow conditions for domestic and industrial flow meters.

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

- WP4 addresses the need to develop new knowledge and guidance on:
  - Which flow meter types can measure hydrogen with the required accuracy?
  - Can a calibration with air be used, or do we need hydrogen at real T and P conditions?
- Answering these questions will enable industry end users to make an informed choice on selection of flow meters for their applications, and the most cost-effective choice on calibration methods.
- CEN/TC 234 & CEN/TC 237 provided a STAIR request end of 2022: Aim: To develop conversion methods for the existing measuring instruments used for measurement of natural gas. Comparison of the results with air and hydrogen as a calibration medium.
- WP4 partners have recent experience and knowledge on these topics, but more evidence is needed before we can make recommendations.

## RESEARCH AND STANDARDISATION

### RESPONSE FORM for Standardisation groups

**Opportunity for standardisation to contribute to the *European Partnership on Metrology EPM* under Horizon Europe**

**Objective: to collect standardization needs and suggestions to develop research projects in testing and measurements for the upcoming European Partnership on Metrology\* (EMP) calls in 2023**

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## Tasks

- Task 4.1: Background research and definition of a test plan
- Task 4.2: Domestic meter calibrations with hydrogen, HENG and alternative gases
- Task 4.3: Industrial meter calibrations with hydrogen, HENG and alternative fluids
- Task 4.4: Assessment of calibration methods

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## Task 4.1: Background research and definition of a test plan

- Review existing studies on calibration methods (incl. alternative fluid calibrations)
- Identification of knowledge gaps: which meter types and gases are already sufficiently understood, which to prioritise

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## Task 4.1: Background research and definition of a test plan

- Findings of the background research will inform the WP4 test programmes
- 26 studies and papers collected on hydrogen and HENG calibrations
- Report writing in progress, 1<sup>st</sup> draft by end of Feb

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## Task 4.1: Background research and definition of a test plan

- Review existing studies on calibration methods (incl. alternative fluid calibrations)
- Identification of knowledge gaps: which meter types and gases are already sufficiently understood, which to prioritise
- Preparation of test plans
  - Domestic meters
  - Industrial meters
- The test plans and findings of background research will be presented at the A5.1.13 workshop in M12
- Stakeholders will be asked to provide input e.g. on prioritisation of meter types and gases

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## A5.1.13 Workshop on state of the art for the calibration of gas flow meters for use with hydrogen

- August 2025
- Part of WP5, but organised by NEL
- Aiming for 30-50 attendees, primarily from meter manufacturers, TSOs, DSOs, standardisation bodies
- Presenting key findings from our background research
- Presenting our planned test programme for domestic and industrial meters
  - Selected meter types, calibration labs and fluids
  - Knowledge gaps addressed and expected outcomes
  - Input requested from attendees on prioritisation, used to finalise plans

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

Task 4.2: Domestic meter calibrations with hydrogen, HENG, and alternative gases

Task 4.3: Industrial meter calibrations with hydrogen, HENG, and alternative fluids

- Source test meters
  - At least 25 domestic gas meters, as required by A4.1.3 test plan
  - At least 15 industrial gas meters as required t by A4.1.4 test plan
- Calibrations with various fluids
  - Hydrogen, natural gas, HENG
  - Air, N<sub>2</sub>, helium, water
- Summarised in report and uploaded to project website
- Meter manufacturer and model anonymised

# WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

## Task 4.4: Assessment of calibration methods

- Analysis of domestic and industrial meter calibration results
  - Estimation of measurement uncertainty
  - Comparison of error curves for each fluid
  - Assessment of multi-fluid calibration models and efficacy of alternative fluid calibrations
- Dissemination of findings to standardisation committees incl. CEN/TC 237, ISO TC 30
- Journal paper on results of domestic and industrial gas meter calibrations
- Good practice guide on flow meter selection, and calibration methods for use with hydrogen and HENG

## WP4: EVALUATION OF DOMESTIC AND INDUSTRIAL GAS METERS

# Stakeholder Committee (SC)

- At least one SC meeting per year (probably online)
- H2FlowTrace consortium wants to understand the needs of stakeholders and obtain feedback that help shape the project (e.g. via questionnaires)
- We want you to be aware of H2FlowTrace activities, so that you can exploit some of the outcomes produced by the project in the near future.
- We open the door to closer collaborations (e.g. meter testing)
- You will receive invitations to additional stakeholder workshops (in-person) and relevant events
- You will receive the project newsletter to learn about project progress

## Flow measurement traceability for hydrogen in gas networks

### About the project

Large-scale decarbonised hydrogen projects are expanding across Europe, nevertheless there is no large-scale verified metrological infrastructure to perform traceable pure hydrogen flow calibrations for gas networks.

H2FlowTrace aims to develop the required metrological infrastructure, which has the potential to reinforce Europe's leading position in the hydrogen economy.

### The partners

### The objectives

- Establish robust metrological infrastructure for flow rates and pressures applicable to the transmission and distribution gas networks
- Design and test traceability transfer skids for pure hydrogen and hydrogen/natural gas blends
- Perform (i) primary calibrations of domestic gas meters and (ii) primary and secondary calibrations of industrial gas meters
- Demonstrate the establishment of an integrated European metrology infrastructure facilitating the take up of the developed technologies

Check out our project flyer, publishable summary and other news/publications on our website:

<https://h2flowtrace.eu/news-and-publications/>

We invite you to follow regularly as we will upload new content throughout the duration of the project.

# Invitation EMN Energy Gases Workshop

**Date:** 26th & 27th of March 2025

**Location:** VSL facilities: Thijsseweg 11,  
2629JA Delft, the Netherlands

Organised jointly by: Met4H2, BiometCAP  
and MetCCUS

Register here: [VSL](#)

There will be a poster of H2FlowTrace in  
the exhibition and H2FlowTrace project  
representatives for networking.

Public event (registration required)

## EMN Energy Gases Workshop

**March 26-27, 2025**  
**Delft, the Netherlands**

Progress on the metrology infrastructure to integrate hydrogen, biomethane and carbon dioxide in the European energy system.

- ✓ LAB TOUR
- ✓ +20 ORAL PRESENTATIONS
- ✓ 2 DAYS NETWORKING
- ✓ POSTER EXHIBITION

**REGISTER NOW** →
